Analytical Euler–Lagrange model vs MuJoCo: residuals over 5631 recorded states with the rail limit inactive
1: $M(q)$ vs mj_fullM
2: $C\dot{q} + g$ vs qfrc_bias
3: $-D\dot{q}$ vs qfrc_passive
4: $\ddot{q}$ vs qacc
5: $\hat{\tau}$ vs mj_inverse
